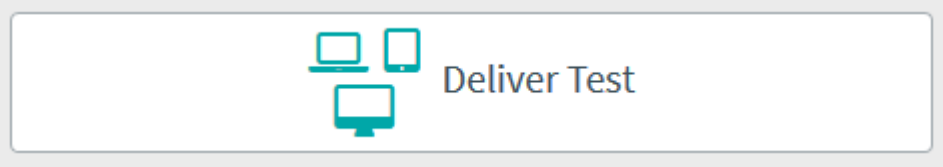
Online Assessment - Installing SecureClient

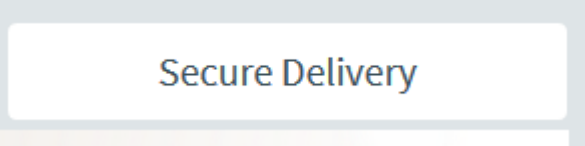
SecureClient is an application that is ideal for high-stakes, summative testing. SecureClient locks down the candidates' computer so that no other programs or files can be accessed for the duration of the test. Advance download of tests are available, meaning that tests can be taken offline or in a centre with slow or intermittent internet connection. All items and candidate responses are securely stored and uploaded back into the Surpass Test Administration system when the test has been submitted.

Installing SecureClient to individual computers

- Log in to Surpass - https://gateway.surpass.com/Login
- On the Home screen – Select Deliver Test



- Select Secure Delivery



- Select Download SecureClient (MSI) to add to an individual machine

After installing the SecureClient, it is recommended that you run at least one practice test on each computer you intend to use prior to live tests being delivered.
